The identity

One fixed system for the product, brand, and future interfaces.

PRIMARY WORDMARK

STRAIN

ON DARK SURFACES

STRAIN

AI

AI monogram

Use for app icons, favicons, and compact navigation. The wordmark is the primary brand signature.

CORE PALETTE

Cobalt	Pale blue	Ink	Canvas	Border
#2563EB	#93C5FD	#18181B	#FAFAFA	#E4E4E7

Typography

IBM Plex Sans

Understand every assessment.

Test real behavior. Review the evidence. Make every fix repeatable.

ROLE	WEIGHT	TYPICAL SIZE
Body and descriptions	400	16px / 1.5
Controls and table text	400-500	14px / 1.5
Section and page headings	600	20-32px / 1.2
Brand and major headlines	700	32-48px / 1.15
Metadata	400-500	12px / 1.5

IBM Plex Mono

```
assessment_024   staging   00:42
status: complete | evidence: 24 items
```

Use Mono at 400 or 500 for code, trace IDs, and machine-readable details. Use Sans for navigation, prose, and forms. Use tabular numerals for numeric columns.

Spacing and shape

4px base unit: 8, 12, 16, 24, 32, 48, 64. Base radius: 8px. Keep the existing Lucide icon family. UI tracking stays normal; the logo has its own fixed spacing.

Color roles

Keep surfaces neutral. Use cobalt for brand and primary actions. Components use semantic tokens, paired with their foreground values.

ROLE	LIGHT	DARK
Primary	#2563EB	#93C5FD
Text on primary	#FFFFFF	#18181B
Primary hover	#1D4ED8	#BFDBFE
Page background	#FAFAFA	#09090B
Main text	#18181B	#FAFAFA
Cards and popovers	#FFFFFF	#18181B
Muted surface	#F4F4F5	#27272A
Muted text	#52525B	#A1A1AA
Selection surface	#EFF6FF	#172554
Text on selection	#1E40AF	#DBEAFE
Structural border	#E4E4E7	#3F3F46
Input border	#71717A	#71717A

Status colors stay separate

Error | Warning | Success | Info

Pair statuses with words or icons. Chart colors are category roles, not severity. Never add component-specific hex values; change the shared theme instead.

Primary button contrast: 5.17:1 light, 9.82:1 dark. All defined opaque text/surface pairs exceed 4.5:1. Verify opacity and focus treatments in context.

Usage and handoff

Logo sizing

Keep at least half the capital-letter height clear on every side. Use the wordmark at 120px wide or larger; use the AI monogram below that. App icons start at 24px, with the supplied 16px favicon as a browser exception.

Keep the artwork consistent

Use the supplied light, dark, black, white, and cobalt variants. Keep the aspect ratio, letter spacing, and colors intact. Avoid gradients, shadows, strokes, rotation, and substituted fonts.

What is in the kit

`logos/`	Outlined SVGs and transparent 1200px / 2400px PNGs
`icons/`	AI marks, app icons, ICO, Apple and maskable artwork
`social/`	A 1200 x 630 cobalt social card, SVG and PNG
`fonts/`	Original desktop TTFs, web WOFF2s, and OFL licenses
`frontend/`	Theme CSS, Tailwind aliases, metadata and manifest
`sources/`	Editable SVG, geometry, palette and font provenance

Frontend source of truth

apps/web/src/brand.css owns the colors and self-hosted fonts. styles.css maps them to Tailwind. The app already uses this identity in the sidebar, favicon, and font stacks.

Fonts: IBM Plex / SIL OFL 1.1. Original files are pinned to Google Fonts commit 0b58fb37 (March 3, 2026). Preserve the bundled license notices with font redistribution.
